# WALL FLASHING

FOR ROOF, CHIMNEY AND TERRACE

COLORFUL. PROFESSIONAL. SIMPLE.

# Striking wall flashings

- Modern and refined look
  - Available in two standard colors or a range of special colors
  - Much sturdier than conventional wall flashing profiles
  - Made from high-quality, galvanized and organically coated steel
  - Easy to work
  - Available as a wall and impact protection profile
  - Available with an end profile cover
- Supreme quality **Made in Germany.**

# Colorful yet simple design

Several carefully coordinated details produce an impressive whole. Hamburger Blechwerk has a particular specialism in connection rails. The aim is to integrate them into the architecture and to promote sustainable construction and environmental considerations.

The colors anthracite (similar to RAL 7016) and white (similar to RAL 9016) provide a high degree of design

flexibility. You can also choose from a variety of special colors as well as other materials, such as copper and zinc.

The matching profile covers conceal the technical details of the wall flashing rail for a minimalistic finish. So give your wall flashing profile some thought and incorporate it into your overall roof concept, both in terms of color and design.

# Durable, eco-friendly, perfectly conceived

The high-quality and eco-friendly materials guarantee the durability and sustainability of the product. In order to meet sustainable building requirements, only galvanized and ecologically coated European steel in accordance with DIN EN 10346 and 10169 is used. This material has been used successfully for decades and has a much better environmental footprint than aluminum, for example.

It is also characterized by low expansion, high strength thanks to the beading, and excellent workability.

The double-sided zinc plating in combination with the organic coating gives the GreenCoat® steel perfect corrosion protection. Even cut edges do not corrode if handled correctly due to the cathodic effect of the galvanized steel sheet.

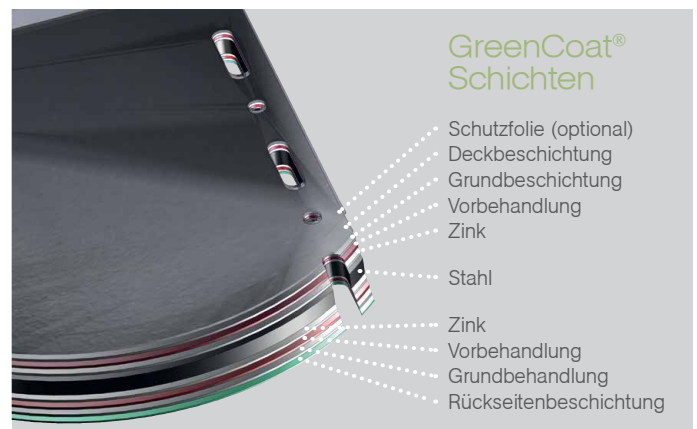

## GreenCoat®

GreenCoat® is a registered trademark of SSAB.  
[www.ssab.com/brands-and-products/greencoat](http://www.ssab.com/brands-and-products/greencoat)

GreenCoat® products all have BASTA approval, meaning that they meet the agreed environmental and health criteria.

# Complete, professional range

In addition to the wall flashing profile, Hamburger Blechwerk also offers an impact protection profile and associated profile covers for joining a roof to vertical building components.

The entire range is available in various colors. Screws of matching colors provide an attractive and harmonious look. The profiles are

also available in copper, zinc and Corten steel as a special model.

## Material properties

The base material of our profiles is high-quality, galvanized GreenCoat® steel from SSAB with a sustainable coating derived from Swedish vegetable oil.

With a 25-year manufacturer's warranty on the appearance of the coating and 50 years on the functionality of the material.

- Available in anthracite (similar to RAL 7016) and white (similar to RAL 9016), special colors on request
- Material thickness 0.6 mm, zinc plating 350 g/m<sup>2</sup>
- Material compliant with EN 10346 / DX 52D
- Coating thickness top 36 µ, bottom 10 µ
- Working temperature -4°F to +104°F
- Corrosion resistance RC 5

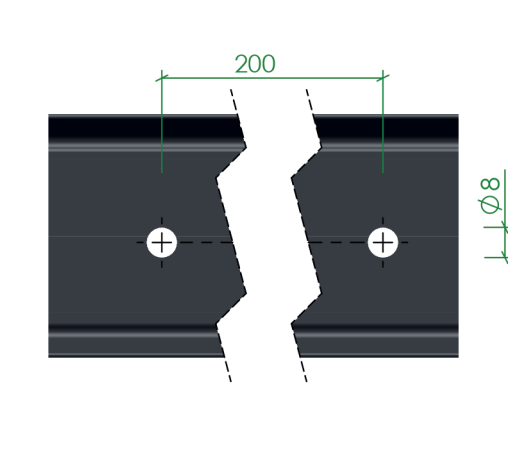

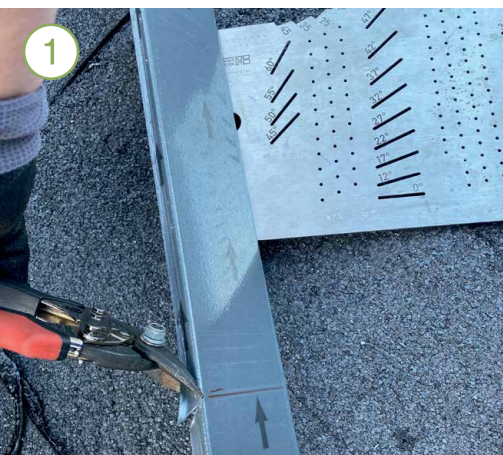

# Easy to install

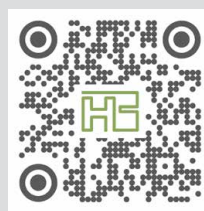

A clean finish is a sign of quality. As such, ease of installation is just as important as the quality of the product itself. To this end, the wall flashing profiles can be laid directly on top of one another and easily lengthened (see photos 3 and 7). The inner corners of the profile covers can be easily produced by cutting and bending the sides using sheet shears (see photos 1 and 2). The profile covers are placed directly

against one another and lengthened (see photos 3 and 4). Corners are generally very easy to produce by cutting and bending the profile (photos 5 and 8).

Thanks to the range of wall flashing profiles from Hamburger Blechwerk, you can effortlessly satisfy DIN standards (18531) and the regulations of the Central Association of the German Roofing Trade (ZVDH, point 4.3).
