

# FACADE SYSTEMS

**QUICK  
PANEL**  
COLOURFUL. DURABLE. UNIQUE.

Simple design.  
Maximum quality.  
Made in Germany.

## Coloured panels of the highest standard

Among other things, the architecture of a building is determined by choosing the right façade. An impressive façade invites the observer to linger. Hamburger Blechwerk provides façade panels which are used on both large areas and smaller components such as a dormer or chimney.

The different colours and formats allow you to vary the appearance, and therefore give surfaces a vibrant look.

A façade also gives your building decades of permanent protection.

It is subjected to extremely high loads, and withstands UV radiation, cold, heat, hail, rain, air pollution etc. The quick panel from Hamburger Blechwerk fulfills these requirements.

## Remarkable facade system

- aesthetic, unpretentious appearance
- made from high-quality zinc plated and organically coated steel
- available in three basic colours and other materials
- quick and easy to process
- universally deployable
- lifelong sustainability
- environmentally friendly recycling
- extremely durable
- harmless to health during processing

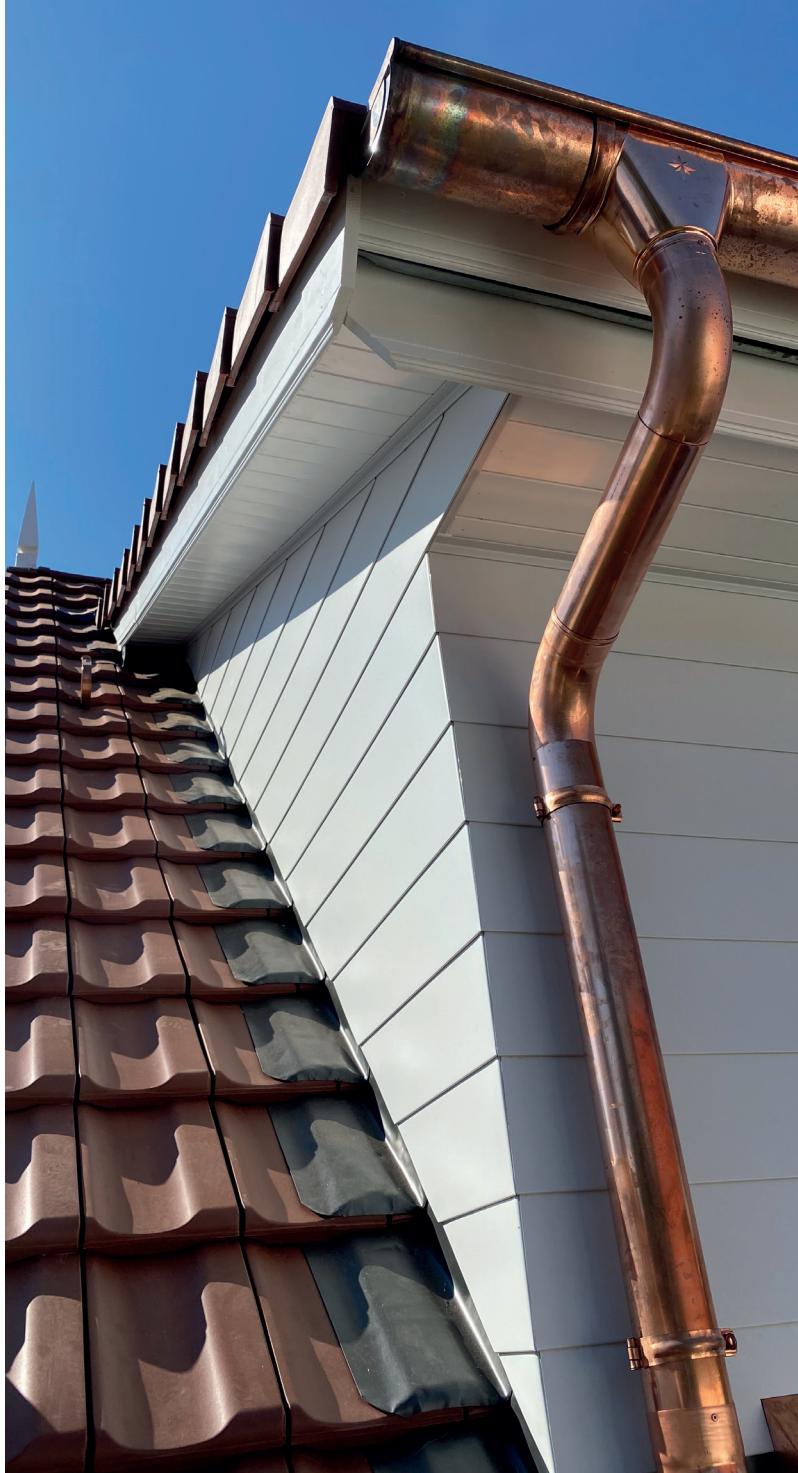

## Fascinating design

The wide range of uses of a perfectly coordinated system is only recognisable at second glance.

The details blend discreetly into the architecture. The perfect adaptation to the solid and timeless design becomes visible on the basis of this historic building.

## Flexible in use

You can give free rein to your ideas. It is left to your imagination whether you want to clad small components, as shown here, or entire façades. It is a matter of taste whether you vary the format or colour of the quick panels.

The material that you decide to use, be it zinc plated coloured steel, zinc, copper or Corten steel, is ultimately also your design decision.

Your ideas are easy to implement with the façade system from Hamburger Blechwerk ... coloured, long-lasting, simple ...

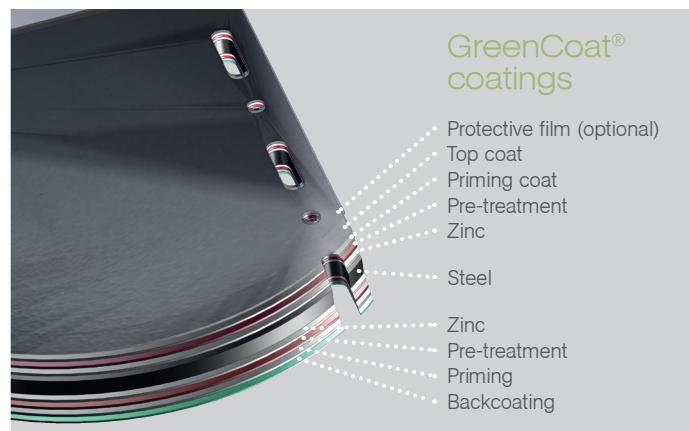

# GREENCOAT®

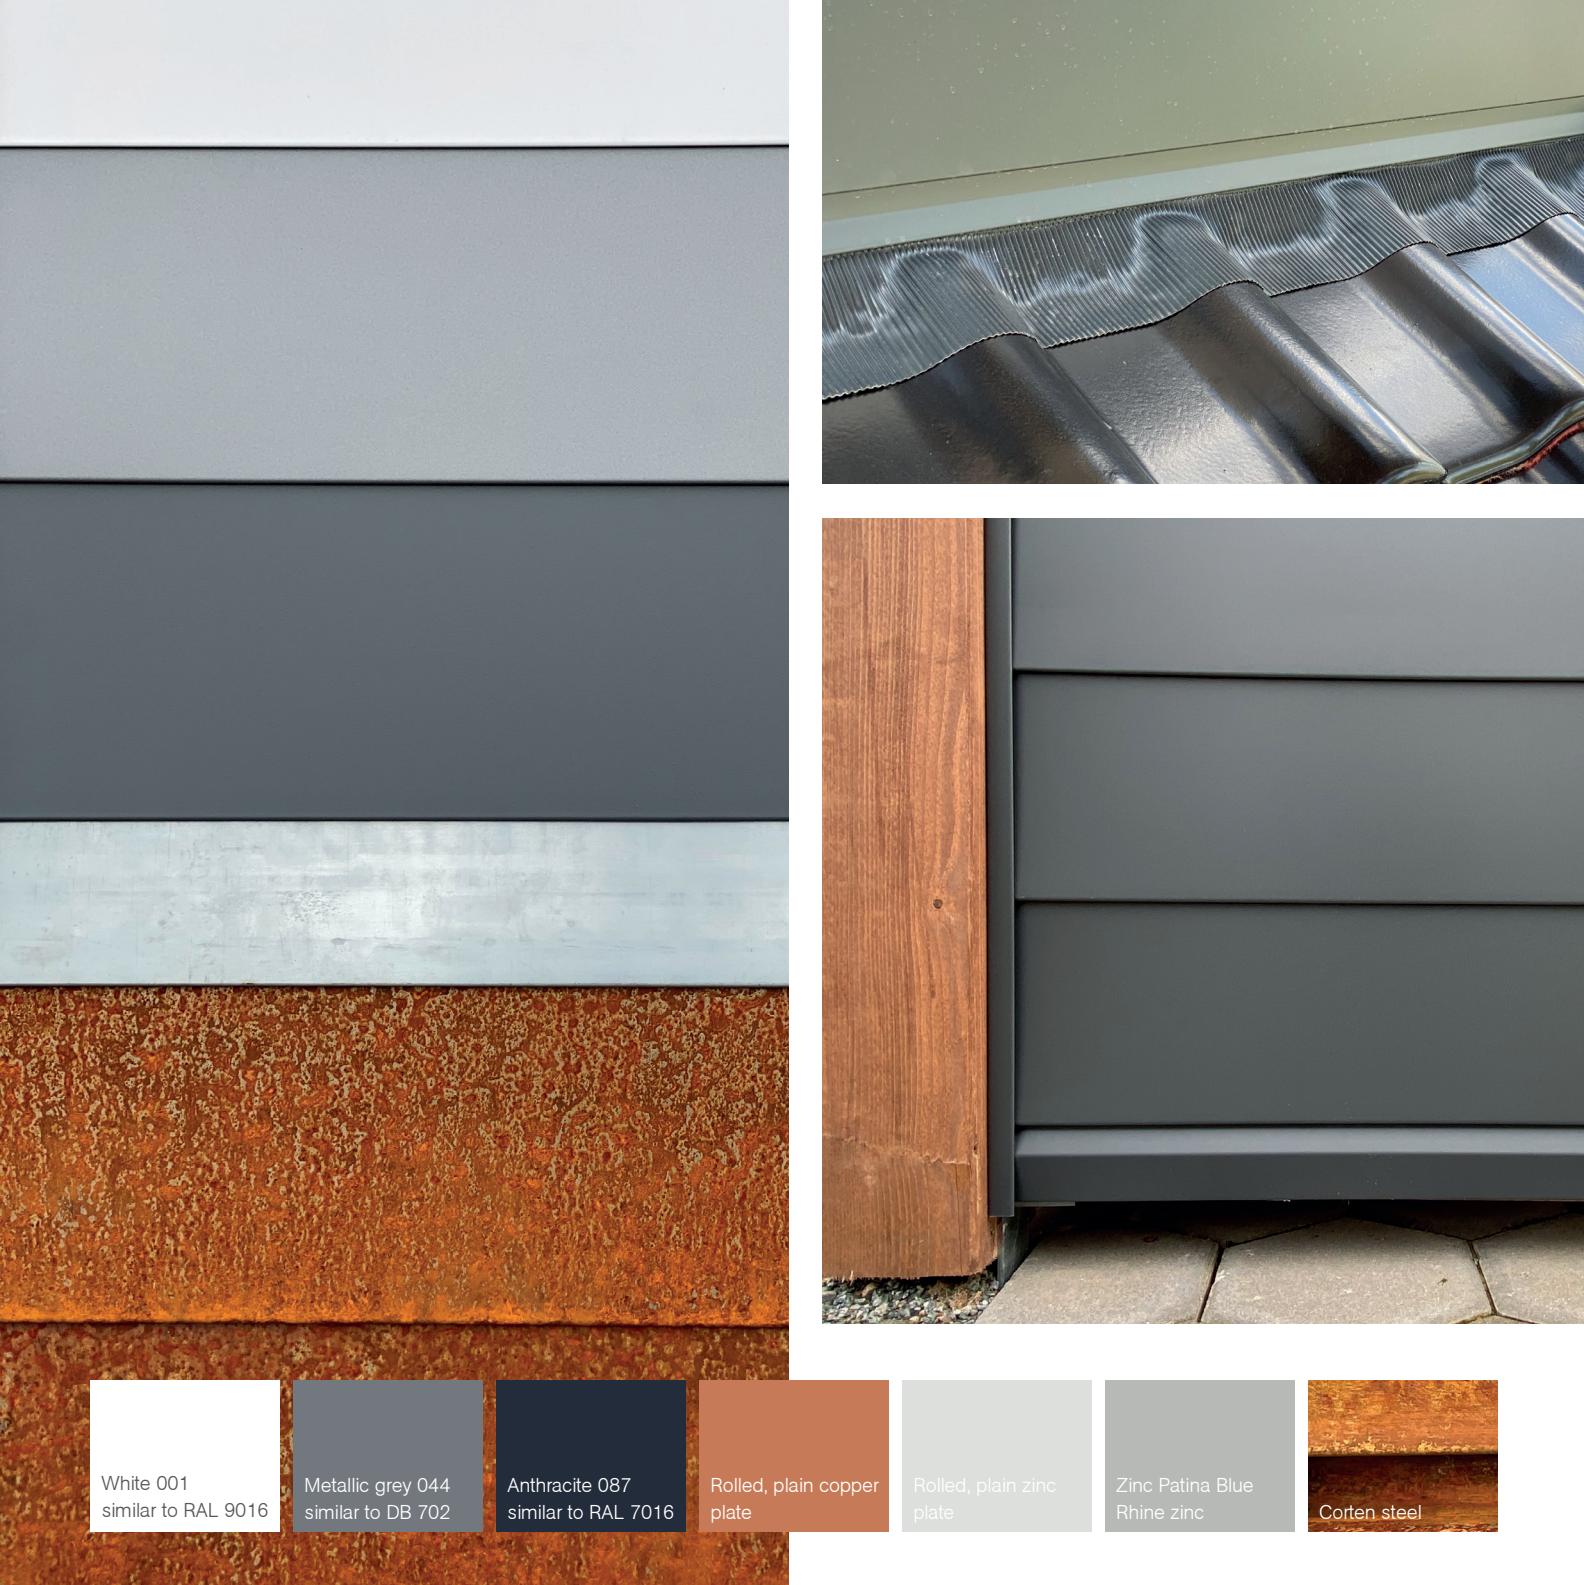

COLORFUL STEEL

GreenCoat® is a registered trade mark of SSAB. [www.ssab.de/GreenCoat](http://www.ssab.de/GreenCoat)

The BASTA certification is confirmation that GreenCoat® products fulfil the agreed environmental and health criteria.  
See [www.bastaonline.se](http://www.bastaonline.se)

## Properties of GreenCoat® steel

In addition to zinc, copper and Corten steel, one of the base materials for our profiles consists of high-quality, zinc plated GreenCoat® steel from SSAB, with a sustainable coating derived from Swedish vegetable oil – with a manufacturer's 25-year guarantee on the appearance of the coating and 50 years on the functionality of the material. Available in anthracite (similar to RAL 7016),

white (similar to RAL 9016) and metallic grey (similar to DB 702), special colours available by request.

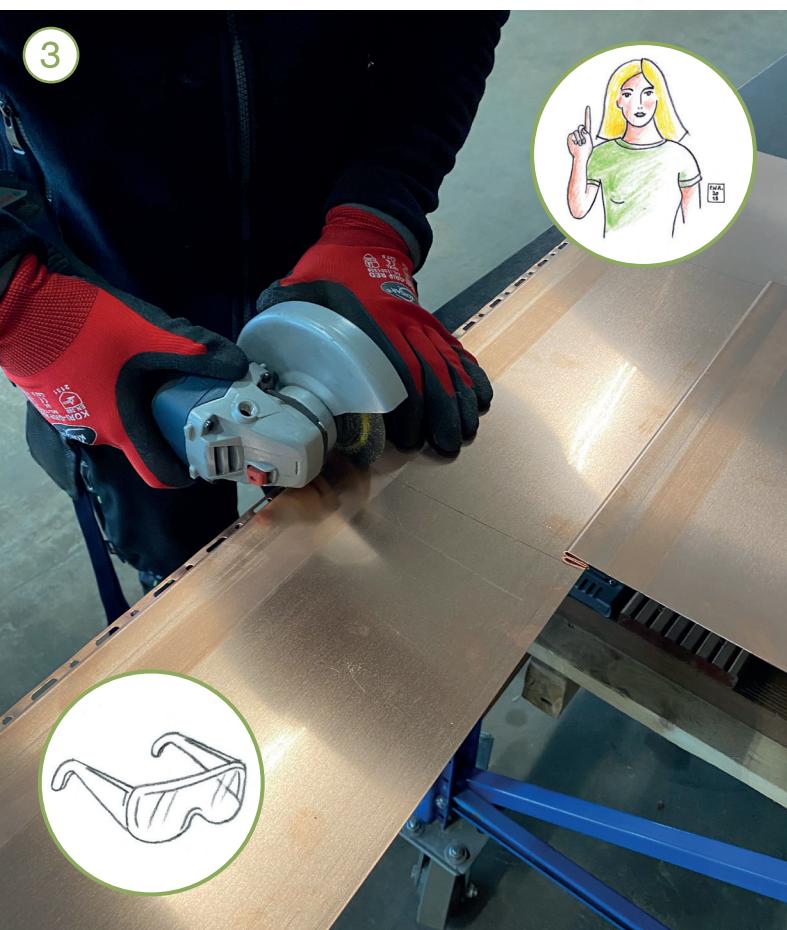

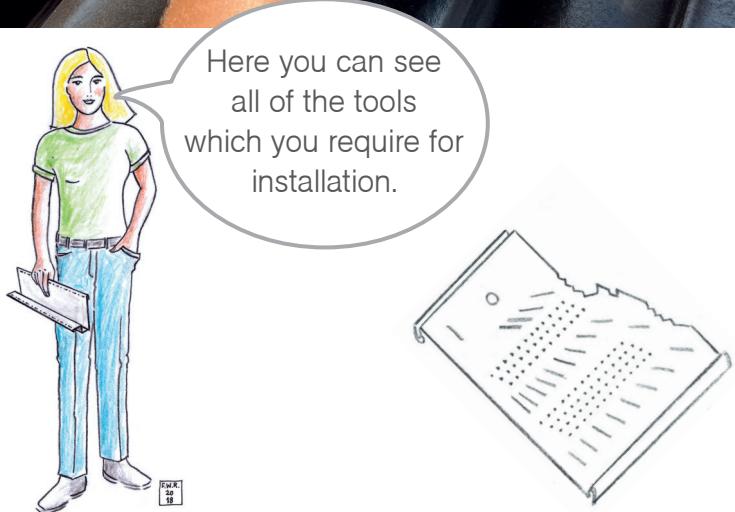

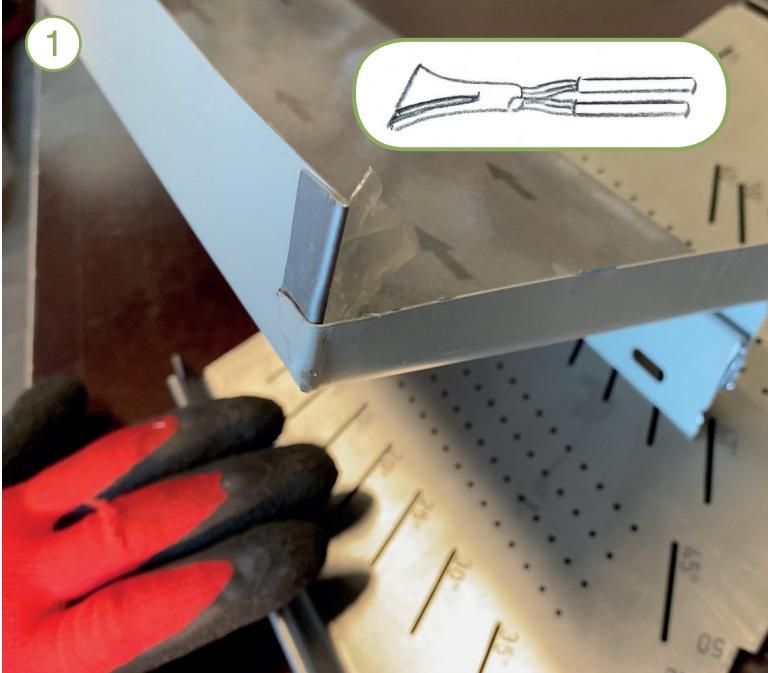

- Material thickness 0.6 mm, zinc plating 350 g/m<sup>2</sup>
- Material in accordance with EN 10346 / DX 52D
- Coating thickness top 36 µ, bottom 10 µ
- Processing from -20 °C to +40 °C
- Corrosion resistance RC 5

# Easy to install

A neat finish is a sign of quality. This is why ease of installation is just as important as the quality of the product itself. The system consists of a basic panel in different widths, start and end profiles, and several recurring profiles and accessory products. Each element can be adapted to the respective usage area with just a few work operations.

The panels are laid directly on top of each other, and are easy to lengthen (see number 5). Installation takes place from top to bottom (see number 4). Special edging (e.g. window sills (see number 1) or corners (see number 2)) can be manufactured from the basic panels directly on the building site. Cutting recommendation (see number 3): Use of shears or an angle grinder with a max. 0.8 mm stainless steel disk.

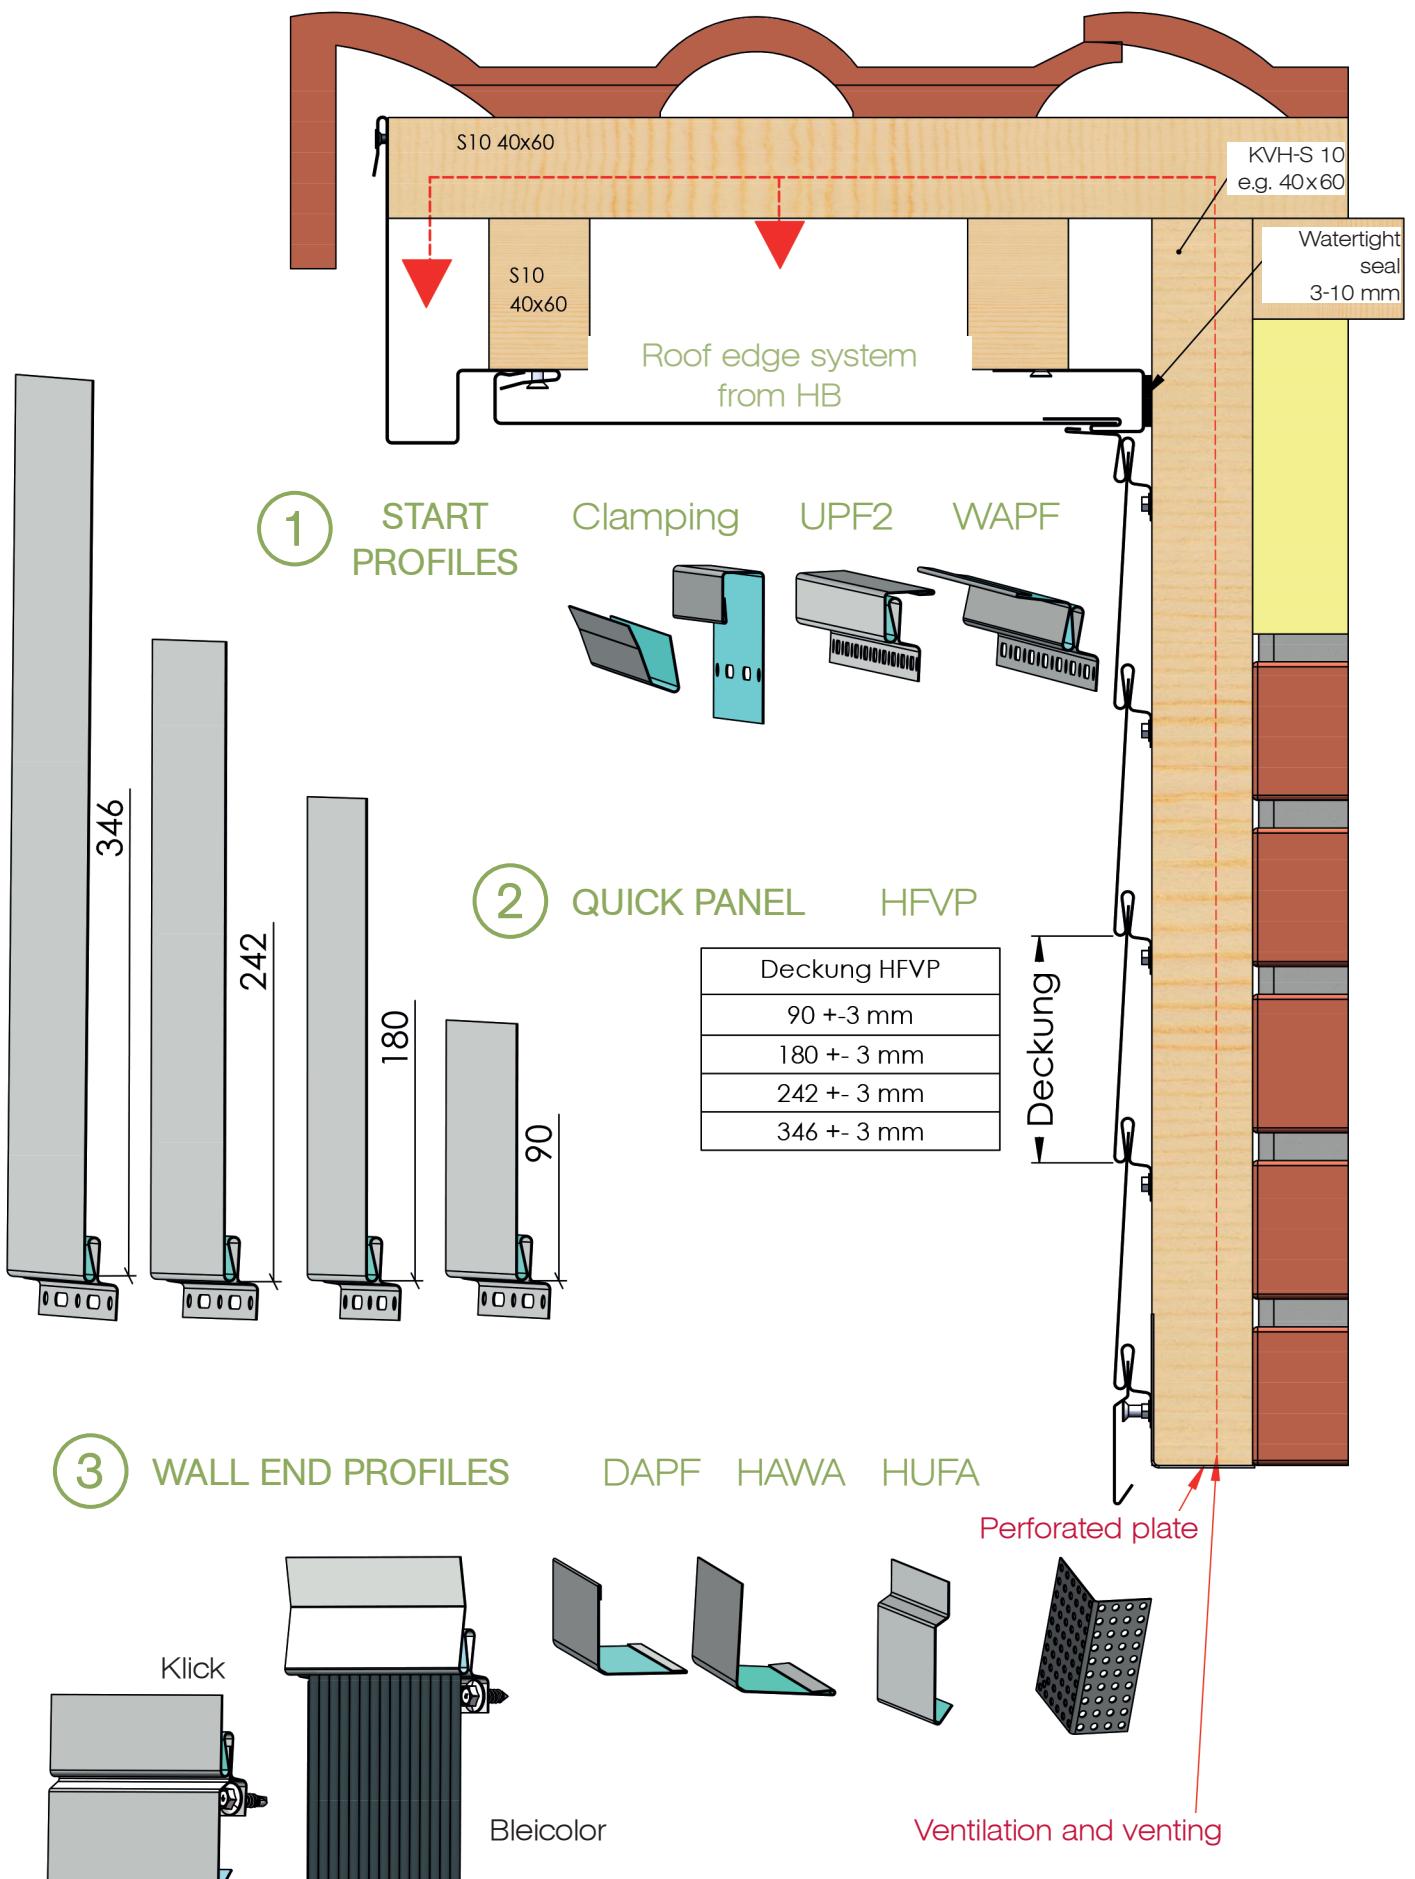

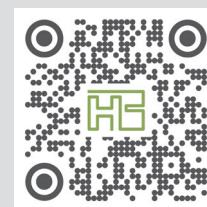

## Flexible in use
